## OBJECTIVE

---

I seek challenging opportunities where I can fully use my skills for the success of the organization and to use technologies to solve real world problems that we are currently facing in our country.

## EXPERIENCE

---

04 July 2022 - 10

Dec 2022

- **University of limpopo**

Class representative

1. Represent my class to the lecturer.
2. Resolving concerns and issues of students
3. Acting as a liason between the students and the lecturer.
4. Interact with the class, gather student's input for meetings and give them feedback.
5. Ensure that students are informed about developments and decisions that concern them.
6. Actively look for ways to solve problems faced by the students and make recommendations to the lecturer.

12 Dec 2021 - 21 Dec

2021

- **Department of education**

Examination assistant

Ensure that scripts are marked.

Confirm the marks on the scripts.

Data capturing.

General assistance ( carrying of cardboxes . delivering them to the markers).

## EDUCATION

---

2022

- **University of limpopo**

BSc in computer science

Degree will be Completed by 10 December 2022

2022

- **IBM**

Introduction to cloud

2022

- **IBM**

Introduction to containers,kubernetes, and openshift v2

2022

- **Nemisa**

Mobile digital literacy

2021

- **Mtn business app academy**

Building mobile application

NQF Level 5

- **Rasila secondary school**

Grade 12

## SKILLS

---

- Kotlin
- Java
- C++
- MySql
- Firebase
- Ux /Ui designer

## PROJECTS

---

- **Building health mobile application named COMSIDY**

As final year projects are vital, our lecturer grouped us, 10 students in each group to build a mobile application that will solve real world problems that we are currently facing and we came with the solution of comsidy .Comsidy which stands for community subsidy.i was the group leader of our project .comsidy is an application that was designed to request emergency transport services and viewing of medical records. Our application works in this manner, firstly it's a mobile application, web based application and a desktop application. Mobile application belongs to patients users and admin users of the hospital can access it via desktop or web based application.patients needs to sign up in the application and authenticated via email.patients users once they are signed up will see the home page consisting of 3 icons ( report emergency, uploading of medical history and settings) Report emergency icon patients will be able to request emergency and select the condition on the template which consists of many diseases if it's not listed a person can be able to mention whatever the case may be.after the person has requested the emergency, the person's location has to be enabled and will be sent to the admin users with all the necessary information (the condition).Once patients have seen the medical doctor, they can be able to upload their medical history (everything that the doctor wrote including prescription, to avoid re explaining of your past health problems).The motive of building comsidy was to make better standard of living in our country, since well it takes times to get emergency help, I believe this application was going to help to subsidy the problem we have in the health facilities. Especially the issue of medical files that are created at hospital they get thrown after 5 years which means after 5 years you will have to create another file meaning you lost important information that may help with the new diagnosis, comsidy was going to solve the problem since everything will be stored online .

## LANGUAGES

---

- Read, Write and Speak : Venda ,Sepedi and English

## PERSONAL DETAILS

---

- Date of Birth : 28/03/2000
- Marital Status : Single
- Nationality : South African
